

Pitch Deck

Idea for the soonami.io
hackathon – pitch deck
presentation analyzer.

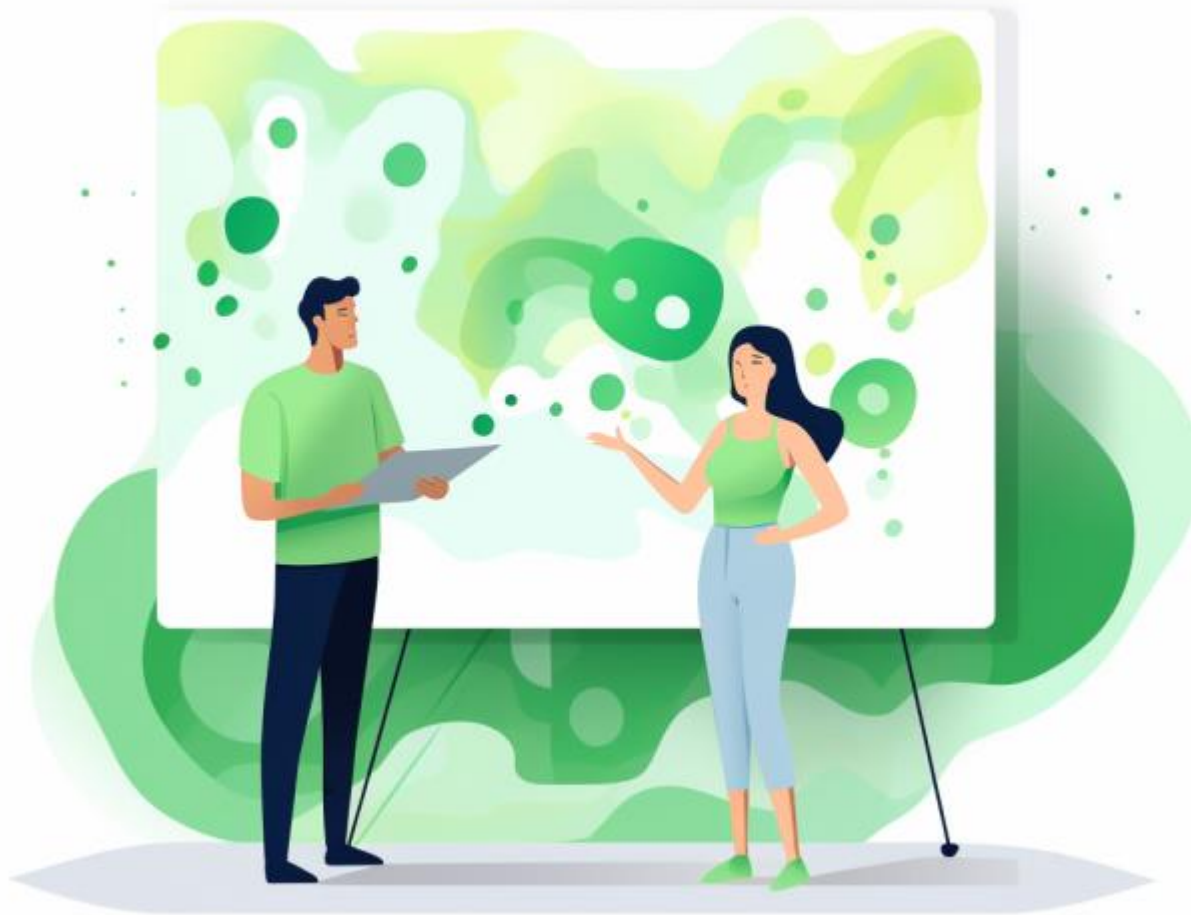

Pitch Deck Presentations

The most important part of any startup.

Depending on your presentation, you can get more investors, more money and better impression of your project.

This startup aims to help you to create this presentation. An AI will give you a **score**, some **advices** about improving your presentation and additional **useful information**.

Market Analysis

What's current progress in this area?

There are dozens of AIs that will help you to generate a pitch deck, to create a presentation and generate design.

But there is no AI that will rate your pitch deck. How do you know that investors will like it? Or maybe you just want to get some feedback?

That's exactly where our AI startup comes into play.

Strategy

Step 1

Create a ConvNet to score slides design.

Step 2

Create a ConvNet to score slides informativity and structure.

Step 3

OCR + ChatGPT to analyze text in slides,

Step 4

Combination of previous model to give final score and advices.

Additional Info

Implementation

This startup can be implemented as a website, where you upload your pitch deck and get feedback.

Structure

Presentation is converted to multiple PNGs, they are rated by the neural nets, and the feedback is given to the user.

Additional AI

One more AI can be created to also rate the startup idea itself, but this probably will not be implemented during hackathon.

Pitchdeck generation

"bad" slides can be, for example, regenerated by an AI that will create good design and structure.

Thanks!

Let me know what
you think!
